# Lesson 14 DHT11 Temperature and Humidity Sensor

#### **Introduction**

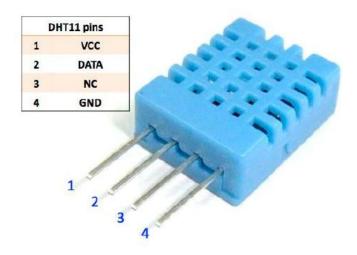

In this lesson, you will learn how to use a DHT11 Temperature and Humidity Sensor.

#### **Hardware Required**

- √ 1 \* RexQualis UNO R3
- √ 1 \* DHT11 Temperature and Humidity module
- √ 3 \* F-M Jumper Wires

### **Principle**

#### **DHT11 Temperature and Humidity Sensor**

DHT11 output calibrated digital signal. It applies exclusive digital-signal-colle cting-technique and humidity sensing technology, assuring its reliability and st ability. Its sensing elements are connected with an 8-bit single-chip computer. Every sensor of this model is temperature compensated and calibrated in an

accurate calibration chamber and the calibration-coefficient is saved in the type of program in OTP memory when the sensor is detecting, it will cite the coefficient from memory.

Small size & low consumption & long transmission distance(100m) enable DH

T11 to be suited in all kinds of

harsh application occasions. Single-row packaged with four pins, making the connection very convenient.

Supply voltage: DC 3.3 to 5.5V

Measuring range (T): -20 to +60 Celsius(-4 to +140 Fahrenheit)

Measuring range (RH): 5 to 95% relative humidity

Typ. Temperature accuracy:  $\pm 2$  Celsius

Typ. Humidity accuracy:  $\pm 5\%$ RH at 25 Celsius

Long term drift(T): <1 Celsius/year

Long term drift(RH) : <1%RH/year

Resolution(T): 0.1 Celsius

Resolution(RH): 1%RH

Sensor Type: Capacitive sensor

Interface: One line digital

Housing material: ABS

Net weight: 1g

#### **Code interpretation**

#define DHT11\_PIN 0 // pin A0

```
byte read_dht11_dat()
{
 byte i = 0;
 byte result=0;
 for(i=0; i< 8; i++){
 while(!(PINC & _BV(DHT11_PIN))); // wait for 50us
 delayMicroseconds(30);
 if(PINC & _BV(DHT11_PIN))
 result |=(1<<(7-i));
 while((PINC & _BV(DHT11_PIN))); // wait '1' finish
 }
 return result;
}
void setup()
{
 DDRC |= _BV(DHT11_PIN);
 PORTC |= _BV(DHT11_PIN);
 Serial.begin(19200);
 Serial.println("Ready");
}
void loop()
```

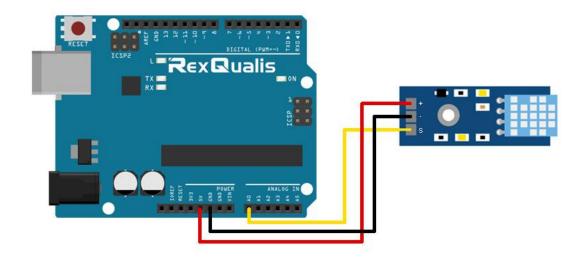

```
{
 byte dht11_dat[5];
 byte dht11_in;
 byte i;
 // start condition
 // 1. pull-down i/o pin from 18ms
 PORTC &= ~_BV(DHT11_PIN);
 delay(18);
 PORTC |= _BV(DHT11_PIN);
 delayMicroseconds(40);
 DDRC &= ~_BV(DHT11_PIN);
 delayMicroseconds(40);
 dht11_in= PINC & _BV(DHT11_PIN);
 if(dht11_in){
 Serial.println("dht11 start condition 1 not met");
 return;
 }
 delayMicroseconds(80);
 dht11_in = PINC & _BV(DHT11_PIN);
 if(!dht11_in){
 Serial.println("dht11 start condition 2 not met");
```

```
return;
}
 delayMicroseconds(80);
 // now ready for data reception
for (i=0; i<5; i++)
 dht11_dat[i] = read_dht11_dat();
 DDRC |= _BV(DHT11_PIN);
 PORTC |= _BV(DHT11_PIN);
 byte dht11_check_sum =
dht11_dat[0]+dht11_dat[1]+dht11_dat[2]+dht11_dat[3];
 // check check_sum
 if(dht11_dat[4]!= dht11_check_sum)
{
 Serial.println("DHT11 checksum error");
}
 Serial.print("Current humdity = ");
 Serial.print(dht11_dat[0], DEC);
 Serial.print(".");
 Serial.print(dht11_dat[1], DEC);
 Serial.print("%");
 Serial.print("temperature = ");
 Serial.print(dht11_dat[2], DEC);
```

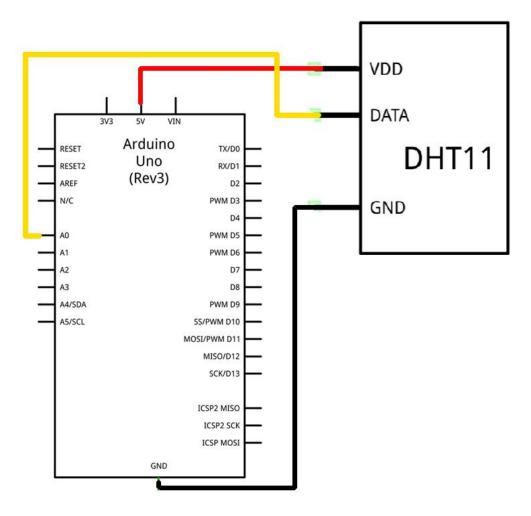

```
Serial.print(".");
Serial.print(dht11_dat[3], DEC);
Serial.println("C ");
delay(2000);
}
```

## **Experimental Procedures**

### **Step 1:Build the circuit**

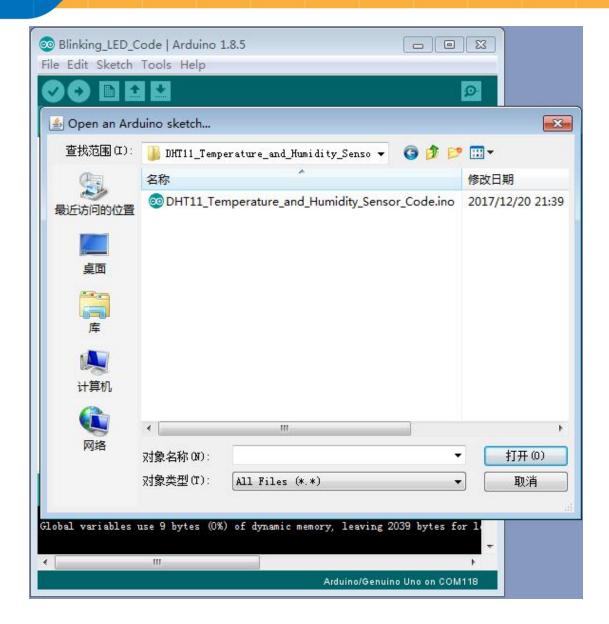

**Schematic Diagram** 

**Step 2: Open the code:** 

 ${\bf DHT11\_Temperature\_and\_Humidity\_Sensor\_Code}$ 

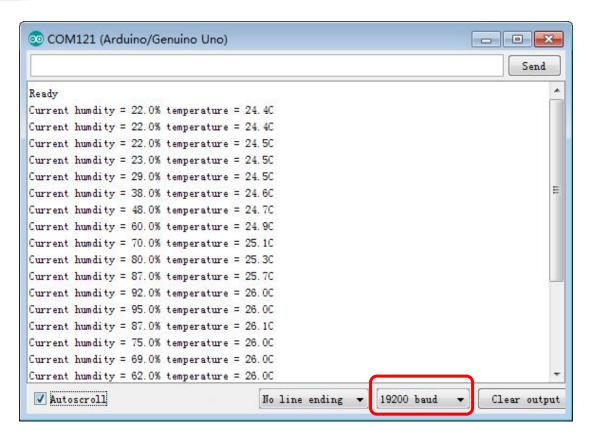

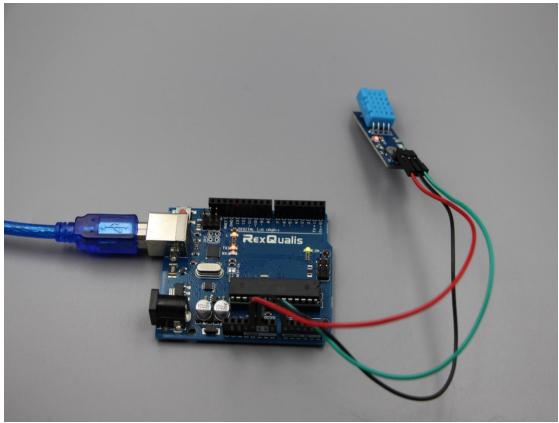

Step 3: Attach Arduino UNO R3 board to your computer via USB cable and check that the 'Board Type' and 'Serial Port' are set correctly.

**Step 4: Upload the code to the RexQualis UNO R3 board.** 

Step 5: Open the Serial Monitor, alter the baud rate to 19200, then you can see the data as below:

(How to use the Serial Monitor is introduced in details in Lesson 0 Preface)

If it isn't working, make sure you have assembled the circuit correctly, verified and uploaded the code to your board. For how to upload the code and install the library, check Lesson 0 Preface.
